

PLAY PROJECT AUTISM TRAINING: A PROFESSIONAL'S ROADMAP TO SUCCESS

BECOME A CERTIFIED PLAY PROJECT CONSULTANT!

The PLAY Project is an evidence-based autism early intervention program that trains child development professionals (SLP, OT, MSW, MEd, PhD, MD) to work with families who have a young child with autism or warning signs for autism. It is effective in helping families, and the model can improve community services. Our developmental, relationship-based approach is fun to learn, practical to implement, effective in helping families, and the model easily adapts to professionals' current service delivery.

IMPLEMENTATION COURSE

During our award-winning asynchronous Implementation Course, participants learn how to master the 7 Circles of the PLAY Project in order to develop the skills needed to:

- 1.) Effectively coach parents and caretakers to playfully engage with their child with autism or other developmental delays;
- 2.) Confidently implement PLAY methods and techniques in a home or clinic setting; and
- 3.) Document the child's developmental progress. After completing the online course, the professional is officially a "Certified PLAY Project Consultant in training" and can begin consulting with families.

The time from workshop to on-line course to working with families can be as short as 2-3 months! This course is designed for working professionals.

How are PLAY
Consultants Trained?

1
